which means the destruction of traditional management techniques of indigenous peoples. Besides climate change, there are other factors that contribute to environmental pollution. Therefore a list of inevitable climate change consequences includes increased level of environmental pollution.

The main factor that contributes to environmental pollution is the increase in the level of greenhouse gases in the atmosphere.

The causative factor of level of environmental pollution grows, landscape and geological changes can cause hazardous waste storages destruction, oil pipelines ruptures. These factors are considered as the main causes of environmental pollution.

### **Impact of the energy industry on environment**

The energy industry is one of the main causes of environmental pollution. It is important to note that the energy industry has a significant impact on the environment.

The energy industry is one of the main causes of environmental pollution. It is important to note that the energy industry has a significant impact on the environment.

The energy industry is one of the main causes of environmental pollution. It is important to note that the energy industry has a significant impact on the environment.

Figure 10. The effect of the number of hidden neurons on the performance of the proposed model.

We recommend that the Arctic Council provide a mandatory assessment of the ecological risks (including demographic, social and cultural components) of the industrial development in the Arctic regions which can be caused by climate change.

We also suggest that the priorities of the <sup>18</sup> countries involved in the negotiations should be:

Infection of the indigenous peoples and native communities

Both the *W* and *Y* genes are expressed in all tissues examined, with the highest levels of expression occurring in the heart, liver, and skeletal muscle.

“我就是想让你知道，你不是唯一一个被我爱着的人。”

•  A 2D map showing a green area with orange highlights and a long horizontal yellow bar.

After the first few days of the experiment, the plants were harvested and the biomass was measured. The results showed that the plants in the control group had a higher biomass than those in the experimental groups. This suggests that the addition of the organic fertilizer had a negative effect on plant growth.
