<del>-</del> -			

# Weaknesses The number of undergraduate statistics majors (Appendix 5) and the number of graduates of this program (Appendix 7) have been low. This is not uncommon among undergraduate programs nationwide. Traditionally, graduate statistics programs have been the primary means of educating statisticians. While the American Statistical

	An organized sustained student recruiting effort is needed. Historically students learned of the undergraduate statistics program by word of mouth or found it on the web.
	However, with more students coming out of high school AP statistics courses we are
<del>*</del>	
	beginning to see freshmen declaring statistics as their major for the first time. This program has the capacity for additional students. Thus, we should arrange to visit high
,	

# Appendix 8 shows enrollment in undergraduate statistics courses. It is clear there are no under enrolled courses in our offerings except perhaps STAT 461, Applied Multivariate Analysis. We have discussed making this a graduate course to attract more graduate students from the sciences. As noted above, growing enrollment in STAT 300 caused us to offer this course more frequently. CS students constitute the majority of the enrollment in this course and it

	Ryphasis on connections between concents and their applications in statistics						
Tr.							
<b>`</b>							
	Computational Topics						

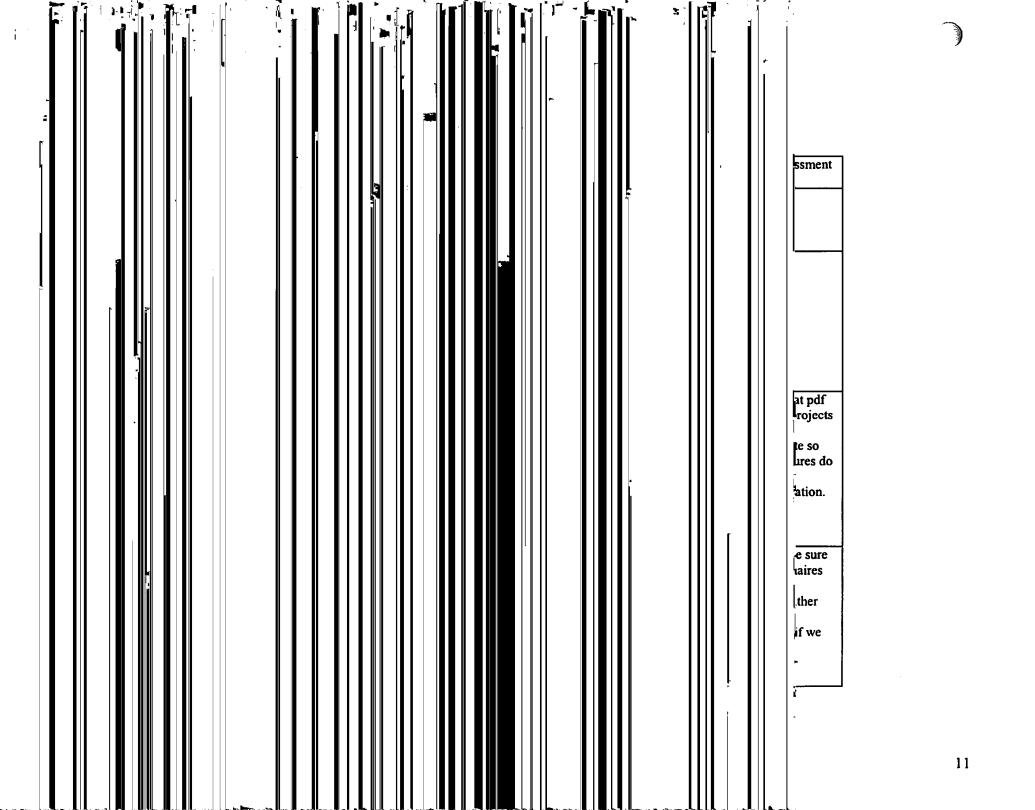

• Programming concepts; data base concepts and technology.

departments with significant statistical content might be allowed to count toward a statistics minor or concentration, though the content of such courses must differ substantially from the others.

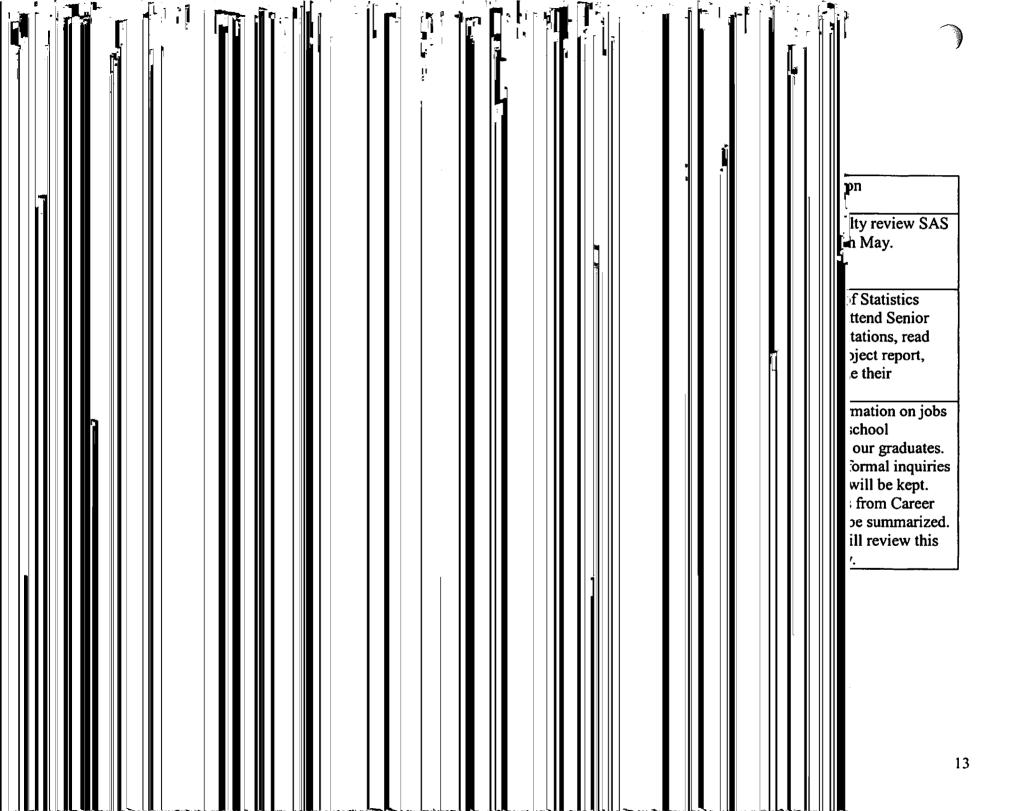

### **Additional Information**

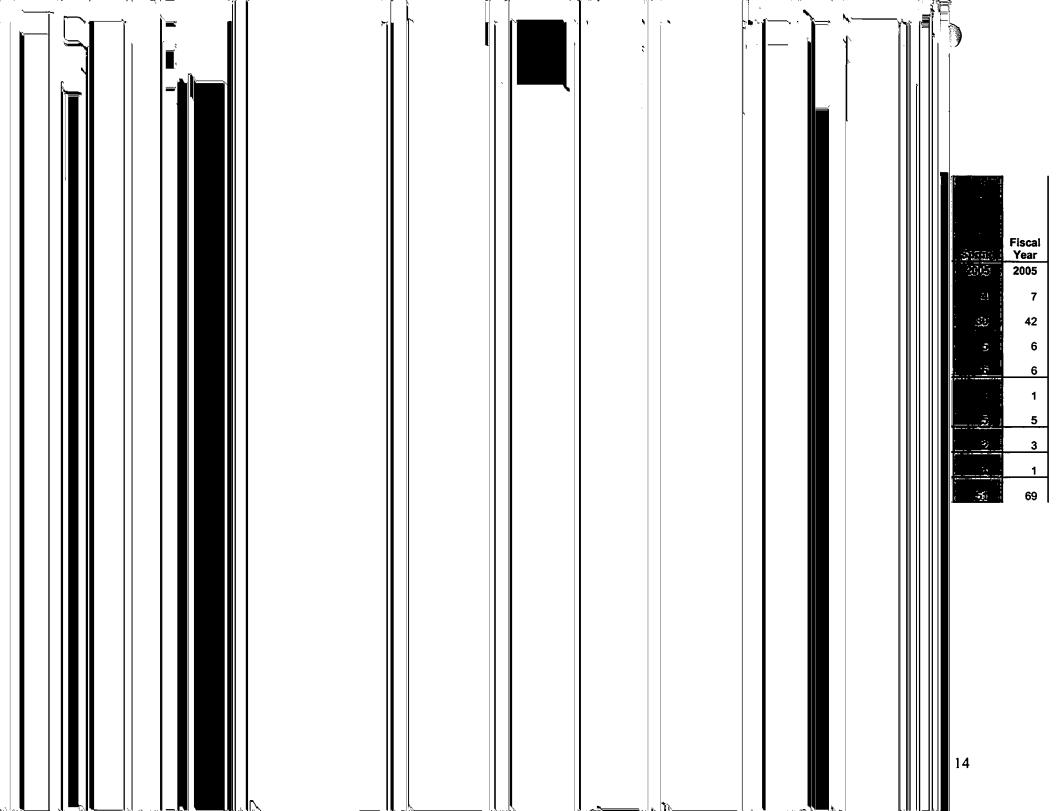

The ASA's <u>Center for Statistical Education</u> (see www.amstat.org) has available more detailed recommendations on statistics programs, along with a list of model programs. These materials have been developed and are maintained by the Section on Statistical Education, in conjunction with other sections and committees of ASA. Those considering new or revised undergraduate statistics programs may contact the <u>Center for Statistical</u>

	ssment Criteria and	Implementation
	mnibus test addressing nts analytical and SAS amming abilities will ministered during their r project course. As no nal test, like the ETS r field test, is available, ill write our own test. est will include ions on basic iptive statistics, ibility (including inal, conditional and distributions), betation and variance, actors and their erties, theory of thesis testing, and cations including ssion, contingency s, and one-way VA.	Review of omnibus test responses by Statistics faculty in May of each year
